Sustainability Considerations on the Roadmap

Data helps make the case for expanding the program. Testing data collection and starting collection early makes things easier.

Patient buy-in demonstrates demand, making the case for potential external financial support.

Careful planning can let you better recognize opportunities to adapt and tailor your program for future sustainability.

Making equity an integral element of organizational values helps equity programs be successful.

A simple and attainable “quick win” builds confidence and momentum, and avoids staff burnout.

A strong culture of equity helps secure resources like money and time.
